

# **Quarex Moral Synthesis Protocol (MSP v1.0)**

## **Core Principle**

Moral synthesis enters only after mechanism, evidence, and consequences have been fully established. It never appears at the question level, evidence layer, or mechanism analysis layer.

## **Standard Wedge Book Structure**

Part I — Historical Emergence (Descriptive)  
Part II — Mechanism Analysis (Causal)  
Part III — Consequences (Empirical)  
— Normative Boundary Marker —  
Part IV — Moral Synthesis (Ethical Interpretation)

## **Normative Boundary Marker**

All wedge books must include a labeled divider:

*'The following section transitions from descriptive analysis to ethical interpretation.'*

## **Moral Synthesis Constraints**

1. Derived, Not Asserted — Principles must emerge from evidence.
2. Universalizable Standard — Must apply regardless of political power.
3. Institutional Framing — Grounded in democratic norms and rights frameworks.
4. No Actor Dehumanization — Critique systems, not populations.
5. Explicit Labeling — Each book ends with an Ethical Synthesis chapter.

## **Ethical Synthesis Label Format**

Examples:

- Ethical Synthesis: Everybody Counts or Nobody Counts
- Ethical Synthesis: Universal Inclusion Standard
- Ethical Synthesis: Equal Protection Baseline

## **Governing Sequence Rule**

Evidence → Mechanism → Pattern → Consequence → Principle

Reversing this order reduces epistemic credibility. Suppressing the final step removes moral clarity.  
Quarex requires both, in sequence.
